GOALS FOR YOUR CARE

People see Chiropractors for a variety of reasons. Some go for relief of pain, some to correct the cause of pain and others for correction of whatever is malfunctioning in their body. Your Doctor will weigh your needs and desires when recommending your care program. Please check the type of care desired so that we may be guided by your wishes whenever possible.

❑ **Relief care:** Symptomatic relief of pain or discomfort.

❑ **Corrective care:** Correcting and relieving the cause of the problem as well as the symptom.

❑ **Comprehensive care:** Bring whatever is malfunctioning in the body to the highest state of health possible with Chiropractic care.

❑ ***I want the Doctor to select the type of care for my condition.***

INFORMED CONSENT FOR CHIROPRACTIC TREATMENT

We encourage and support a **shared decision making process** between us regarding your health needs. As a part of that process you have a right to be informed about the condition of your health and the recommended care and treatment to be provided to you so that you can make the decision whether or not to undergo such care with full knowledge of the known risks. This information is intended to make you better informed in order that you can knowledgably give or withhold your consent.

Chiropractic is based on the science which concerns itself with the relationship between structures (primarily the spine) and function (primarily of the nervous system) and how this relationship can affect the restoration and preservation of health.

Adjustments are made by chiropractors in order to correct or reduce spinal and extremity joint subluxations. **Vertebral subluxation** is a disturbance to the nervous system and is a condition where one or more vertebra in the spine is misaligned and/or does not move properly causing interference and/or irritation to the nervous system. The primary goal in chiropractic care is the removal and/or reduction of nerve interference caused by vertebral subluxation.

A chiropractic examination will be performed which may include spinal and physical examination, orthopedic and neurological testing, palpation, specialized instrumentation, radiological examination (x-rays), and laboratory testing.

The chiropractic adjustment is the application of a precise movement and/or force into the spine in order to reduce or correct vertebral subluxation(s). There are a number of different methods or techniques by which the chiropractic adjustment is delivered but are typically delivered by hand. Some may require the use of an instrument or other specialized equipment. In addition, physiotherapy or rehabilitative procedures may be included in the management protocol. Among other things, chiropractic care may reduce pain, increase mobility and improve quality of life.

In addition to the benefits of chiropractic care and treatment, one should also be aware of the existence of some risks and limitations of this care. The risks are seldom high enough to contraindicate care and all health care procedures have some risk associated with them.

Risks associated with some chiropractic treatment may include soreness, musculoskeletal sprain/strain, and fracture. Risks associated with physiotherapy may include the preceding as well as allergic reaction and muscle and/or joint pain. In addition there are reported cases of stroke associated with visits to medical doctors and chiropractors. Research and scientific evidence does not establish a cause and effect relationship between chiropractic treatment and the occurrence of stroke; rather, recent studies indicate that patients may be consulting medical doctors and chiropractors when they are in the early stages of a stroke. In essence, there is a stroke already in process. However, you are being informed of this reported association because a stroke may cause serious neurological impairment.

I have been informed of the nature and purpose of chiropractic care, the possible consequences of care, and the risks of care, including the risk that the care may not accomplish the desired objective. Reasonable alternative treatments have been explained, including the risks, consequences and probable effectiveness of each. I have been advised of the possible consequences if no care is received. I acknowledge that no guarantees have been made to me concerning the results of the care and treatment.

I HAVE READ THE ABOVE PARAGRAPH. I UNDERSTAND THE INFORMATION PROVIDED. ALL QUESTIONS I HAVE ABOUT THIS INFORMATION HAVE BEEN ANSWERED TO MY SATISFACTION. HAVING THIS KNOWLEDGE, I KNOWINGLY AUTHORIZE DR. CAITLIN PIETROSANTO TO PROCEED WITH CHIROPRACTIC CARE AND TREATMENT.

INFORMED CONSENT FOR IASTM

Please answer the following questions. Read the statements concerning IASTM (Instrument Assisted Soft Tissue Mobilization) and sign below. If you have any questions, please speak with your clinician.

1. Do you bruise easily? Yes No

2. Do you bleed for a long period of time after you cut yourself? Yes No

3. Are you taking blood thinners or anticoagulants? Yes No

4. Do you take aspirin on a regular basis? Yes No

5. Do you take cortisone on a regular basis? Yes No

6. Have you ever had inflamed veins or blood clots? Yes No

7. Do you have surgical implants in your body? Yes No

8. Do you have diabetes or kidney disease? Yes No

9. Do you currently have any infections? Yes No

10. Do you have uncontrolled high blood pressure? Yes No

IASTM is a system of instrument-assisted soft tissue mobilization that aid the trained clinician in detecting treatable soft tissue lesions. The instruments consist of stainless steel instruments of various sizes and contours. IASTM is a form of treatment used to "break up" or "soften" scar tissue, thus allowing for the return of normal function in the area being treated.

IASTM may produce the following:

1. Local discomfort during the treatment.

2. Reddening of the skin.

3. Superficial tissue bruising.

4. Post treatment soreness.

IASTM is designed to minimize discomfort; however the above reactions are normal, and in some instances desirable and unavoidable.

The IASTM protocol has several basic components. Your clinician will determine the protocol for you which may or may not include the following components that are selected after a comprehensive evaluation has been performed.

1. Chiropractic Adjustment

2. Instrument Assisted Soft-Tissue Treatment.

3. At Home Therapeutic exercise to include appropriate stretching and/or strengthening

4. Ice therapy.

All components of IASTM have been explained to me. I understand the risks of the procedure and I give my full consent for treatment.
